

I packed my ~~bag~~ ^{car}
for the BlowerDoor test
and in it I put ...

... an umbrella,

... when I test a cold storage hall which is already in operation. So that the measuring team do not freeze, the test is conducted from the outside.

Unfortunately it sometimes rains ...

... a scooter,

**... to cover the kilometers in large warehouses
more comfortably.**

... many wooden wedges,

... when I do an air tightness test in a prison to keep the inside doors open. A large number of the inner doors close **AUTOMATICALLY!**

... a broom and a dustpan,

... to BEFORE
remove the
ashes from
the chimney.

... scrubs,

...when I perform a measurement in an operating room.

... a cordless screwdriver, wood, and a handsaw,

... if the door opening is too large,
or for constructing
temporary seals.

... two cars,

... in case our colleague Jakob Eykens from Belgium goes on a large measurement with 10 fans and a lot of accessories.

A packing miracle!

... or just a moped.

... in case our colleague Sergio Melgosa Revillas from Spain drives to the BlowerDoor test only with the MiniFan measuring system!
