

Airtight building & renovation

BlowerDoor Test

The airtight building envelope is a prerequisite for the realization of modern energy concepts and for quality assurance in construction.

The advantages of airtight construction are remarkable: Ventilation heat losses are reduced, protection against convective moisture damage is increased.

Other key aspects are the avoidance of drafts, optimized sound insulation and improved indoor air quality.

BlowerDoor 4 you

The BlowerDoor test is recommended

- 1 | for quality assurance during the construction phase
- 2 | as a final measurement after completion of the construction process
- 3 | before expiry of the warranty
- 4 | in existing buildings before renovation or for damage analysis
